KEEP KIDS HEALTHY GERMCURE'S GOT SAFETY SORTED

2020 brought changes to every aspect of our lives, from hand-washing to pocket-sized sanitisers and wearing a mask when going out. So, will everything go back to normal soon?

Francois Viljoen, co-founder of GermCure, doesn't think so – but what we will see is a “new normal”, where we continue to take precautions and make sure our children do the same. By nature, educational environments are a good example of being a high-risk cross-contamination environment, from water drinking fountains to pupils' desks and chairs. Remember, just because we can't see viruses, germs and pathogens doesn't mean they aren't there – so disinfecting regularly and properly is vital.

Even more vital is using products that themselves don't harm children, says Francois, suggesting every parent ask: “What is the active ingredient in this disinfectant or sanitiser? Is it safe to breathe in? How could it harm my child's skin?”

GermCure's Disinfection Teams are frontline Coronavirus fighters. Using a 100% safe and 100% natural disinfection product means minimum PPE (personal protective equipment) and no ventilation time is required after a clean. You can rest assured your scholar's desk, chair and classroom won't contribute to illness.

The “new normal” should not bring with it worries about the dangers of disinfection. Natural Disinfection IS the future. With GermCure, it is possible to be health-conscious and responsible in a natural, safe, effective and affordable way.
